

OpenTTD: a free transport game

Tom Ryder

tom@sanctum.geek.nz

<https://sanctum.geek.nz/>

Transport Tycoon—1/2

- Developed by Chris Sawyer
- Written in **x86 assembly** (!)
- Released in 1994 for DOS
- Published by MicroProse
- Sequel: *Transport Tycoon Deluxe* (1995)
- *Not free software.*

Transport Tycoon—2/2

- Start with borrowed money, pay off loan with profits
- Build transport routes between **industries** (freight cargo) and **towns** (passengers, mail)
- Build **trains**, **road vehicles**, **planes**, and **ships**
- Race AI competitors to be awarded subsidised routes
- Design complex signaling so your trains run efficiently with no crashes
- Manage reputation with towns, grow them into cities
- React to changing production rates
- Upgrade vehicles as technology advances...

August 1950

Train arrives at Sonston East!

£6,497

Abandonware

- People, including your humble presenter, *adored* the original game.
- But technology marched on, and the game was never updated...
- Nor did it have any worthy sequel...
- Nor a free software release...

TTDPatch

- **TTDPatch** added to and updated the game, and removed limits:
 - New vehicles
 - Electric railways
 - Build on slopes
 - Bigger stations
 - ...much more...

OpenTTD

- But in the end, a patch wasn't enough...
- ***OpenTTD*** came into being!
- A complete rewrite of the game (in C)
- Many of TTDPatch's customisations adopted
- And best of all... **entirely free software (GPL).**
 - Including the graphics and sound!

Installation

On Debian-likes:

```
$ sudo apt install openttd
```

On Red-Hat-likes:

```
$ sudo yum install openttd openttd-opengfx
```

- **Generic binaries** (download, unpack, ./openttd)
- **Build from source** (if you want)

Yes, you can get it through **Steam**...but if you like the game because it's free software, running it in a **proprietary walled garden** defeats the point...

Extra packages

- Required:
 - **OpenGFX**: Graphics set: trains, rails, roads, houses...
- Optional:
 - **OpenMSX**: Music (retro MIDI stuff, I just play my own, e.g. [BUSINESSFUNK](#))
 - **OpenSFX**: Sound effects (trains whistling, electric rails crackling...)

You can use the original *Transport Tycoon Deluxe* files, if you have them, but they're still proprietary, 30 years on. The free ones are better now, anyway.

Gameplay

- A screenshot is worth a thousand words...
- So, here's a few snaps from your humble presenter's most recent online game!

Keeping gameplay challenging

- There are a few gameplay problems with *OpenTTD* at advanced levels that make it stale
- “Cyan” has some practical fixes I found very helpful: <https://cyan.garamon.de/openttd/>
- Including some recommended mods!
 - Definitely try **FIRS**, once you know the game

JGRPP—1/2

- The *OpenTTD* developers don't stray *too* far from the original game design in terms of actual mechanics.
- *Jonathan G. Rennison's Patch Pack (JGRPP)* is a **parallel fork** of *OpenTTD* maintaining an extensive set of patches.

JGRPP—2/2

- Cargo waiting graphs
- Automatic spacing of trains on the same route
- Even more advanced signaling
- Much more...

My 2¢: I like it, and it's definitely worth a look, but only once you're comfortable with the base game...which is complicated enough.

Demo

- Tom will start a **new game** (v14.1) and set up a freight train route, and a bus route.
 - If you've played this game before, heckling is **encouraged**.
- Then he'll show some **saved games** from his sessions during network play with buddies.

Oh hey, look who it is!
